| 📍 Cairo, Egypt | Military Status: Exempted

SUMMARY

Junior .NET Backend Developer with hands-on experience building backend applications using C#, ASP.NET Core MVC, ASP.NET Core Web API, Entity Framework Core, and SQL Server. Skilled in RESTful APIs, OOP, SOLID Principles, Clean Architecture, Onion Architecture, Design Patterns, Repository Pattern, Unit of Work, and Dependency Injection. Experienced in developing secure and maintainable applications using ASP.NET Core Identity and JWT Authentication.

EDUCATION

New Cairo Academy

2022 – 2026

Bachelor's Degree in Computer Science

SKILLS

Backend: C#, ASP.NET Core MVC, ASP.NET Core Web API, Entity Framework Core, LINQ, RESTful APIs

Database: SQL Server, Database Design, EF Core Migrations, Query Optimization

Architecture: Clean Architecture, Onion Architecture, N-Tier Architecture, SOLID Principles, Design Patterns, Repository Pattern, Generic Repository, Unit of Work, Specification Pattern, Result Pattern

Authentication & Security: ASP.NET Core Identity, JWT Authentication, Role-Based Authorization

Caching & Tools: Redis, Git, GitHub, Postman, AutoMapper, Dependency Injection, Visual Studio 2022, SQL Server Management Studio

Soft Skills: Problem Solving, Analytical Thinking, Team Collaboration, Communication, Adaptability

PROJECTS

Smart Health Emergency Monitoring System (Graduation Project)

- Developed backend RESTful APIs using ASP.NET Core Web API for managing health monitoring operations.
- Designed and implemented SQL Server database using Entity Framework Core Code First approach with migrations.
- Implemented JWT Authentication and Role-Based Authorization for secure user access management.
- Built APIs for managing patient data, emergency cases, and system operations.
- Applied Clean Architecture, Onion Architecture, SOLID Principles, and Design Patterns to build a scalable backend system.

E-Commerce RESTful API | GitHub

- Developed a backend E-Commerce RESTful API using ASP.NET Core 8 Web API, Entity Framework Core 8, and SQL Server following Onion Architecture with separate API, Application, Domain, and Infrastructure layers.
- Implemented user registration, JWT Authentication, and Role-Based Authorization using ASP.NET Core Identity.
- Implemented product catalog, shopping basket, and order management features using service-based business logic and DTOs.
- Integrated Redis for shopping basket caching and Stripe for payment processing.
- Applied Repository, Unit of Work, Service Layer, Dependency Injection, Separation of Concerns, and SOLID Principles to build maintainable backend services.
- Implemented EF Core migrations, data seeding, AutoMapper object mapping, and Swagger/OpenAPI API documentation.

LANGUAGES

Arabic (Native), English (Technical Proficiency)
