Professional Summary

Full-Stack .NET Engineer with experience building scalable ERP systems and workflow-driven applications using ASP.NET Core, Angular, and React. Skilled in designing RESTful APIs and optimizing complex business processes. Committed to clean architecture, performance optimization, and delivering real-world business solutions.

Education

Cairo University, Faculty of Engineering

Bachelor of Computer Engineering

Accumulative GPA: 3.3 — Very Good with Honors

Cairo, Egypt

2018 – July 2023

Experience

Full-Stack Engineer at Sure Global Technology Company

Jan. 2025 – Present

- Responsible for designing, developing, and maintaining scalable web applications using a modern tech stack including **ASP.NET Core**, **.NET Web API**, **Entity Framework**, **Angular**, and **Razor Pages**.
- Additionally, develop and manage **custom workflow solutions** to streamline business processes and improve operational efficiency.

Backend Software Engineer at T-Tech Company

Oct. 2023 – Dec. 2024

- In this position, I contributed to an ERP system featuring Apex Attendance-Leaving and POS modules, built with .NET Core Web API technology.
- Provided major support to the Attend-Leaving module by managing core employee data, shift schedules, holidays, and vacation tracking.
- Developed an approval system with role-based permissions, supporting sequential approvals for request validation and decision-making.

Fundamentals of Machine learning and Deep Learning Internship

Sep 2022

Information Technology Institute (ITI)

Giza, Egypt

- Introduction to Artificial Intelligence.
- Statistics for Machine Learning.
- Data Preparation and Exploration.
- Numerical Optimization for Data Science.
- Neural Networks & Deep Learning.
- [Link to my Certificate.](#)

Online Courses and Problem Solving

2020 - 2023

- [Supervised Machine Learning: Regression and Classification.](#)
- [Fundamentals of Deep Learning.](#)
- Strong problem-solving and debugging skills.

Technical Skills

Backend: ASP.NET Core, .NET Web API, Entity Framework, Dapper

Frontend: Angular, React, Razor Pages

Database: SQL Server

Tools: Git, GitHub, Azure DevOps, Docker (Basic)

Concepts: Clean Architecture, RESTful APIs, JWT Authentication, Workflow Systems

Zayed (Online Auction & Tender Management Platform) | *C#, .NET Core, SQL Server, React*

- Designed and developed a workflow system covering auction/tender lifecycle including creation, approval activation, submission, and closing stages.
- Implemented real-time bidding functionality using SignalR to provide live updates for auctions and tenders across all connected users.
- Built a React-based UI for managing auctions, tenders, submitting bids, and handling technical and financial proposals.
- Created an admin dashboard for monitoring auctions, tenders, user activities, and submission analytics.

MT Super App | *C#, SQL, Razor Pages*

- Developed for the Ministry of Tourism in Saudi Arabia using Razor Pages.
- Developed the Hospitality and Reservation dashboards from scratch through integration with the API Gateway using HTTP client calls.
- Maintained and enhanced additional dashboards including Gym, Announcements, Surveys, Promotions, and Notifications.
- Resolved bugs and system issues to improve stability and performance.

SBC Initiatives | *C#, SQL, Angular*

- Developed for the Saudi Business Center (SBC) in Saudi Arabia.
- Worked on User Management, News, Sectors, and Entities modules.
- Built the workflow system for managing technical support reports.
- Implemented management of lookup lists using a shared custom Angular component reused across all lookup screens.
- Developed features including Initiative Source of Challenge, Initiative Goal, Initiative Impact, and Approval Matrix.

Media Services App | *C#, SQL, Angular*

- Developed for the Ministry of Media in Saudi Arabia.
- Implemented an integration service with MinIO Storage to store files on cloud storage instead of local server storage.
- Built dashboards for Media Activities, Recommendations, Achievements, and Controls, visualizing key metrics such as activity counts, achievement statuses across government entities, and request statuses using Pie and Bar Charts.
- Implemented an email alerts service to notify users of updates on their requests.
- Fixed vulnerabilities found in penetration testing to improve application security.

Apex ERP | *C#, SQL*

- Developed a web-based project using ASP.NET Core and Angular technologies.
- Implemented functionality to process and integrate fingerprint attendance data from biometric machines.
- Designed and developed HR and management reports, including Day Status reports and employee lateness summaries to enhance workforce insights.
- Built a permission-driven approval system supporting step-by-step request validation and authorization.

Aiden | *Python*

- An interface integrated with Spotify APIs to help users perform the actions they're used to easily.
- Detects user's hand gestures and performs actions based on them.
- Recognizes voice commands given by the user & determine the action intended.
- The final interface is implemented with web development by React.
