CAREER OBJECTIVE

Data Analyst and Computer Engineer with a strong technical foundation in systems operations, programming, and performance optimization. Experienced in data collection, cleaning, and visualization using **Python, SQL, Excel, and Power BI**, with a proven ability to translate operational data into actionable insights. Demonstrated analytical mindset developed through hands-on field experience in **ATM network performance and maintenance**, enabling a practical understanding of data-driven decision-making in real-world environments. Passionate about leveraging data to improve efficiency, predict outcomes, and drive strategic growth.

PROFESSIONAL EXPERIENCE

Engineer at Raya (Feb 2024 - Present)

Worked as a field engineer supporting the stability and performance of ATM networks across Cairo.

- Collected and analyzed system performance data to identify downtime patterns and optimize maintenance schedules.
- Supported technicians in troubleshooting hardware and software issues using analytical and data-driven approaches.
- Prepared daily operational reports and summaries to ensure service quality and resource efficiency.
- Collaborated with cross-functional teams to track KPIs related to uptime, error rates, and service response times.

EDUCATION

Modern Academy For Engineering And Technology, Cairo (Oct 2017 - Jun 2022)

Bachelor of Computer Engineering

GPA: 2.907 | Graduation Grade: B

PROJECTS

RC Car

Creating and connecting a simple car to a mobile application which is having 2 modes of operation that the user can select from. First mode is manual mode, where the user can control car movements through the GUI using buttons. Second mode is autonomous mode, when selected through GUI by user, in which the car keeps moving, that during the process uses its on-board sensors (IR sensors).

Used Car Price Detector

Predict the cost of the car by taking a dataset with different variables that describes the different parts of a car.

Image Processing Project

Creating and developing a user-friendly UI for applying different image processing and filtering techniques to it.

Break-out

Creating an AI based game where various AI learning algorithms were used to detect the best place, angle and power to hit the ball to destroy the bricks efficiently and quickly.

TRAINING AND CERTIFICATES

- Data Analysis Course – Neuro Tech (2025)
 - ✓ Covered Excel, Power BI, SQL, and Python for data cleaning, visualization, and reporting. Developed several analytical projects and dashboards.
- Machine Learning Training – AMIT Academy (2021) | Grade: A+
 - ✓ Learned data preprocessing, visualization, model training, and optimization using Python. Implemented neural networks and supervised learning models.
- Oracle 10g Developer Training – Next Academy (2020) | Grade: A+
 - ✓ Gained practical experience with SQL and PL/SQL, database design, and report generation using Oracle Developer tools.

COURSEWORK

- Data Structures
- Database Management
- Operating Systems
- Software Engineering
- Artificial Intelligence
- Pattern Recognition
- Digital Image Processin

TECHNICAL SKILLS

- Python
- SQL Databases
- Excel
- Power BI
- C
- C++
- Embedded C
- HTML
- CSS
- Bootstrap
- JQuery
- Machine Learning
- AVR Microcontroller
- Microsoft Office

Soft SKILLS

- Project Management
- Presentation Skills
- Time Management
- Project Planning
- Problem-Solving

LANGUAGES

Arabic (Native)
English (Very Good)
Chinese (HSK1)
